

## General Informations

---

### development and targets

The **Q.P.T. Innovative Technik Handels GmbH**, established in 1992 is a trading house of innovative metrology. After the company has been taken over by Mr. Kaltenstadler in 1997, the headquarter moved to Sauerlach near Munich. The main scope of duties is the individual care of costumers in all questions of industrial metrology. It starts where big companies cannot reach the costumer, because of capacity problems. On the basis of high market demands for costumer care, the Q.P.T. GmbH has established a base in Schweinfurt in 2001 and a base in Murg, in the federal state Baden-Württemberg in spring 2002. Besides known companies in Germany in the section of automotive and other branches of investment and commodity good production, costumers in all EURO –countries, in Switzerland and countries in east-europe are well advised by competent consultants in all questions of metrology.

**Own Products**, such as Stylii and tips for contour-, form- and 3D measurement systems are part of the sales program as well as gage blocks and standards for fast function check of above mentioned equipment. Another development of Q.P.T. GmbH is the TKU 40, a system which allows a fast check of all oncremental and inductive stylii, as well as mechanical and electronic dial indicators and comparators. The PC-Stylus-boxes (AK4 and IK2) are designed for checking individual incremental and inductive stylii (e.g. Talymin) in the production site under Windows enviroment.

The **traded products** are measurement equipment of all known markers such as monitoring devices, hand-held measuring equipment (e.g. calipers,gages), optical measurement equipment, 2D- and 3D- measurement systems, temperature measurement equipment, as well as cleaning systems (e.g. ultrasonic) and other innovative products e.g. illumination equipment.

**Secondhand measuring equipment** which is serviced, checked and cleaned, is an economic alternative for small and middle sized companies. These equipments are supplied with transportation, putting in operation, training, calibration and maintenance service.

The **management and the whole team**, follow the strategy of longterm partnership with costumers and suppliers. Not the "fast-EURO" is the target of the Q.P.T. GmbH, but the fast delivery of high-quality products and services at marketable prices. This objective makes a compent Partner of the Q.P.T. GmbH in all questions of metrology.
